USDA's three **SUN SUMMER NUTRITION PROGRAMS FOR KIDS** offer families more ways to get their kids the nutrition they need when school is out. Lack of nutrition during the summer makes students more likely to fall behind in school and experience health issues.

Administered by the NC Department of Public Instruction, USDA reimburses meal sponsors for serving meals at no cost to youth ages 18 and younger in low-income areas during the summer.

Meals and snacks at in-person sites

SUN Meals are in-person **congregate meals** (eaten in a group setting), which is the traditional way of providing nutrition when school is out for the summer. Meals and snacks are served at locations such as libraries, faith-based organizations, parks, camps, and at schools that often provide summer learning. Many meal sites offer fun, engaging, and educational activities.

Meals for delivery/pick up in some rural areas

SUN Meals To-Go are **non-congregate meals** offered in some rural communities that are often the most under-served areas. How meals are distributed vary by sponsor and may include options such as: meals picked up by designated adults, multiple meals provided at once, and meals delivered to neighborhoods or in some cases, directly to homes.

Administered by the NC Department of Health and Human Services, operating in 2024 for the first time.

Grocery benefits per eligible child

SUN Bucks (Summer EBT or S-EBT) gives grocery-buying benefits on a debit-like card to families with eligible children. The one-time payment per eligible child was \$120 for the summer of 2024, but the amount may vary from year-to-year. Families receiving SUN Bucks also are encouraged to participate in the other Summer Nutrition Programs..
